Concert environments for a live performance.

Real-time stage visuals for YEANA’s performance in Yunnan, produced with Amateurist Studio. Unreal Engine environments combine forest imagery, the band’s emblem and animated lighting.

My role covered co-direction, production coordination and Unreal Engine content development.

Co-Director & Producer · Unreal Engine Artist

Delivered production

YEANA

Exhibition and observation spaces above the city.

The competition proposal transforms the tower through selective retention and new intervention. I contributed Revit production and independently produced Unreal Engine sequences exploring the proposed Tower Top as a public cultural destination.

Sharing ritual across distance.

Sacred Intelligence proposes connected spaces in Gonggar and London for shared making, teaching and meditation. Field research, film and working physical prototypes explore how remote participation could acquire a collective, spatial presence.

Interviews, field visits and practitioner dialogue.

Conversations with Buddhist practitioners and scholars connect the project's spatial and technological experiments to living practice. Documentary interviews were recorded in Lhasa, Gonggar and Beijing.

Gonggar and London: paired spaces for shared practice.

Fieldwork in Tibet in April 2026 informed four pairs of proposed spaces for making, teaching, meditation and responsive imagery.

From sand delivery to robotic drawing.

The working deposition head combines four independent sand channels, colour switching and a soft brush tip. Successive mechanism tests were followed by demonstrations and dialogue with practitioners in Tibet.

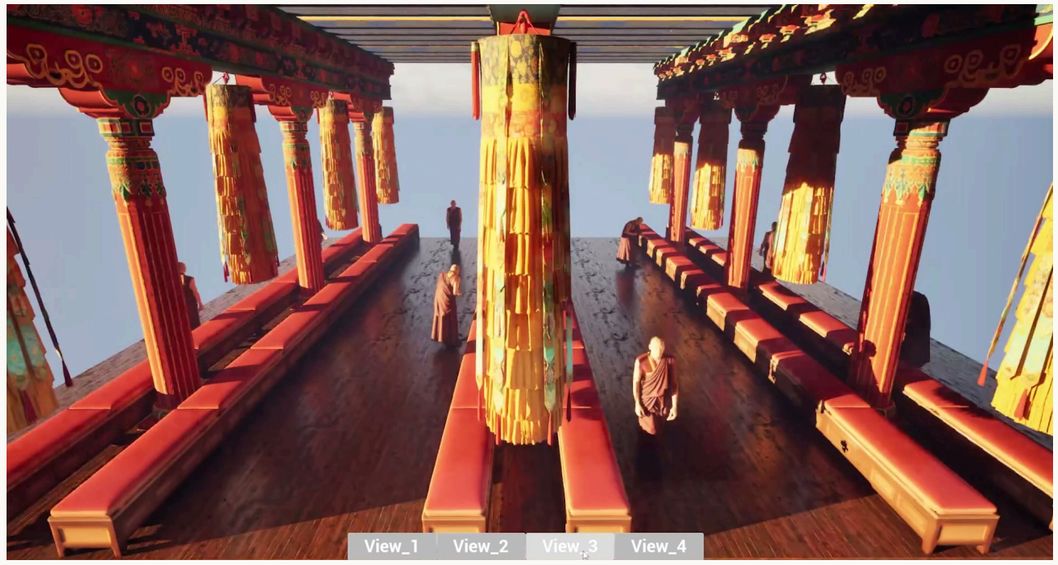
01 / CAPTURED SPACE

3D Gaussian Splatting

A captured subject, presented as a navigable digital reconstruction.



02 / DESIGNED SPACE

Pixel Streaming

A separate real-time demonstration of the proposed environment, with selectable viewpoints.

When a billboard becomes a place.

The film imagines advertising detached from the façades of Times Square and gathered into a transformable media structure. Screens, frames and circulation routes become a world that people can enter.

One structure.
Changing identities.

A transformable assembly carries screens, circulation and occupied spaces. Physical models and geometric studies explore how one framework can change between the film’s parade configurations.

03 / Structural and circulation studies

Advertising returns as an annual event.

The imagined annual parade transforms commercial imagery into a moving restaurant, then into the midnight ball. The final image enters the structure’s afterlife: occupation among the screens and supporting frames.

03 / The Afterlife

Community storytelling across physical and virtual performance.

Developed through collaboration with theatre artists in Archway, the project reinterprets Joseph Grimaldi through interactive tarot cards, character digitisation and virtual environments. Costume preparation and capture tests develop the performer’s identity across both media.

A tactile room.
A changing virtual world.

The project maps a physical room into a virtual environment. Tracked objects and movable elements explore how actions in the room can change the digital scene, while a digitised performer carries the theatrical identity across both spaces.

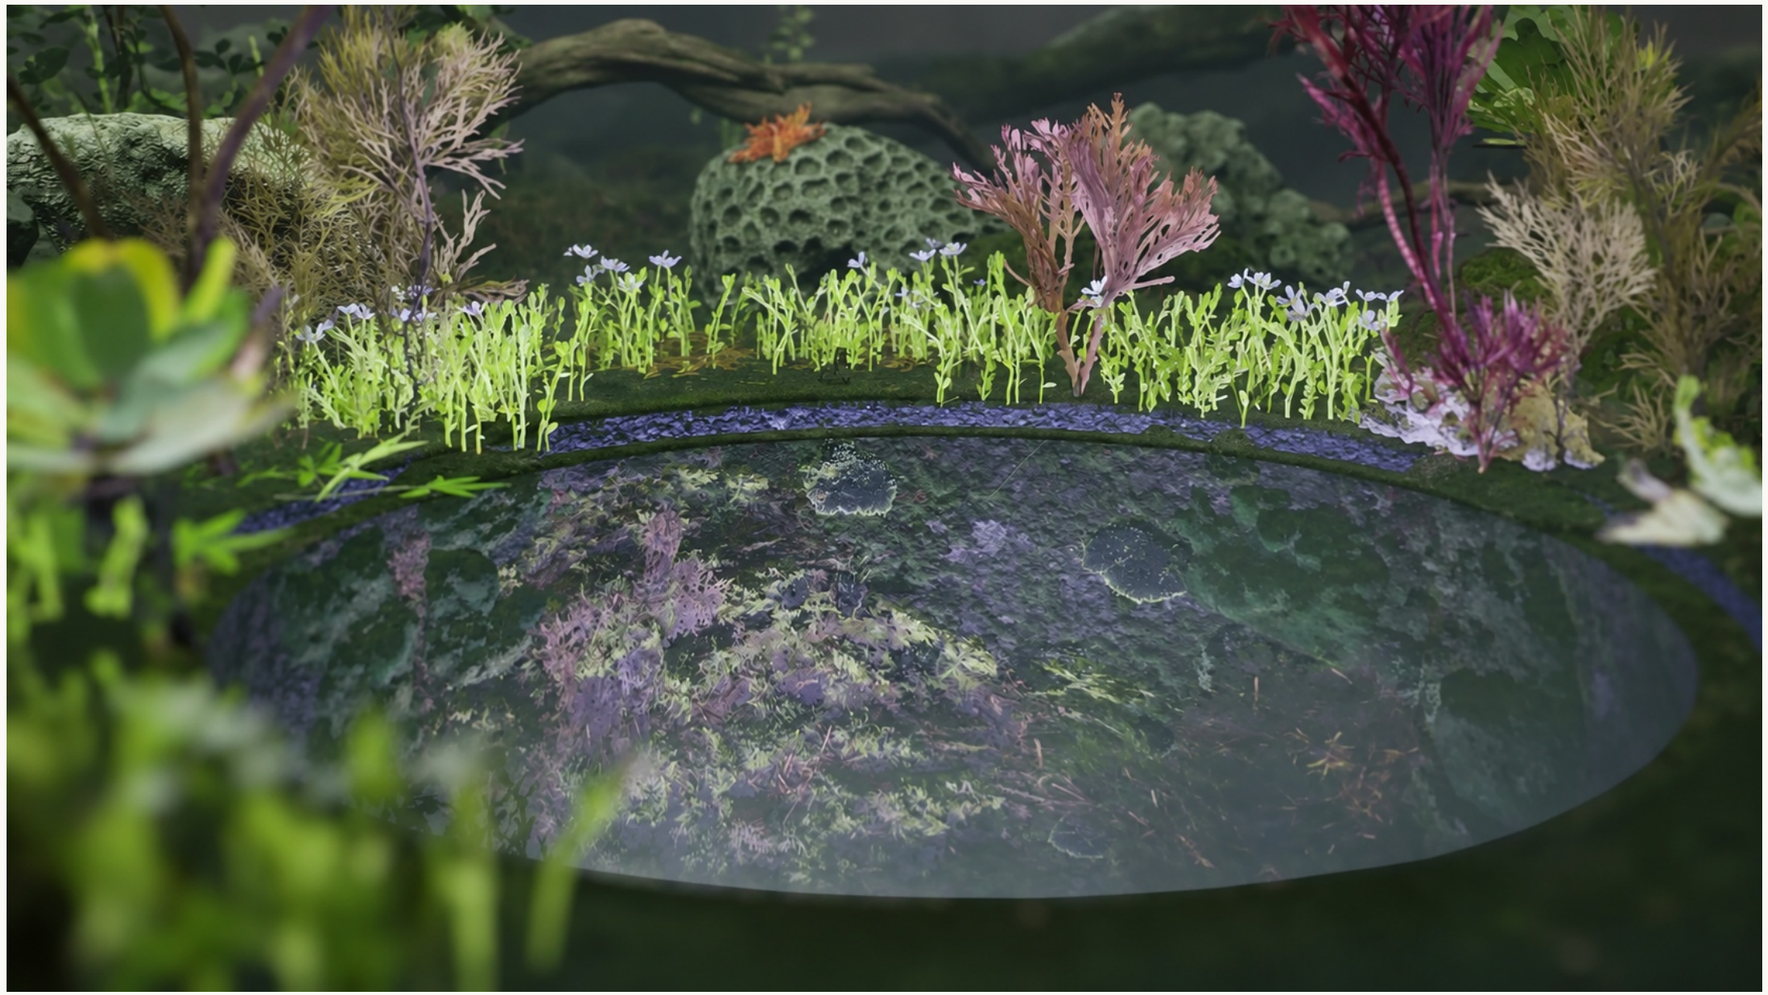
Independent short film

A World Out of the Well



A World Out of the Well · Film still

A forest continually remade from waste metal.

Inspired by the Ship of Theseus, the project imagines architecture as a living organism. Discarded metal is repeatedly reassembled into evolving structures and new spaces. The film explores this cycle of replacement and transformation.

Director · 3D Artist · Animator

Exhibited at Canal Dream · 2023
